

Name of the Faculty: Science	Department: Biotechnology
Program: M.Sc. Medical Biotechnology	Type: Theory + Practical
Subject: DSC-3 Clinical Microbiology & Serology	Semester: 2
Credit: 04 + 02	Total Learning Hours: 60
Course Description: This course deals with the clinical aspects required in diagnostic laboratory set-up. It covers the basic fundamentals about microbiological, biochemistry, cytogenetic and serological diagnosis, the techniques and protocols, automated updation of the laboratories.	
Student Learning Outcome: After completion of the course student will: <ul style="list-style-type: none"> • Understand basic requirements and regulations to be followed in a commercial diagnostic laboratory. • Know the core fundamentals of immunology, biochemistry and microbiology involved in diagnostics. • Apply these fundamentals for detection and diagnosis of various diseases/disorders. • Get equipped with instrumentation and equipment necessary in diagnosis. 	

Unit-1: Introduction: (5h)

- 1.1 Historical Overview of Serology & Clinical Microbiology
- 1.2 Clinical Pathology Lab & various types of Lab
- 1.3 Standardized clinical lab set up & materials necessary for Clinical & serological tests
- 1.4 Collection, preparation & preservation of serological specimen
- 1.5 Introduction to NABL (National Accreditation Board for Testing and Calibration Laboratories) & CLSI (Clinical & Laboratory standards Institute)

Unit-2: Immunology (06 h)

- 2.1. Overview of Immunity & immunology with their related terms
- 2.2 Cells & organs of Immune System
- 2.3 Immunoglobulins - classes, structure, function
- 2.4 Cell Mediated Immunity
- 2.5 Complement System
- 2.6 Inheritance of ABO blood group system (Bombay phenotype)

Unit-3: Clinical Microbiology-I: (8h)

- 3.1. Microbes as parasites
- 3.2. Bacteria (Staphylococcus, Streptococcus, Bacillus, Listeria, Escherichia, Salmonella, Vibrio, Leptospira, Mycobacterium)
- 3.3. Viruses and prions
- 3.4. Disease causing fungi
- 3.5. Protozoa
- 3.6. Helminths and arthropods
- 3.7. Host parasite relationship

Unit-4: Clinical Microbiology-II: (8h)

- 4.1. Safety and specimen management

- 4.2. Culture media: Composition, types and forms
- 4.3. Cultivation and identification of microbes
- 4.4. Routine urine examination
- 4.5. Routine examination of faeces
- 4.6. Routine examination of semen and semen washing
- 4.7. Routine examination of sputum
- 4.8. Laboratory diagnostic methods for mycoses

Unit-5: Clinical Biochemistry-I: (10h)

- 5.1. Macromolecules: (Water, Carbohydrates, Amino acids, peptides, proteins, lipids)
- 5.2. Glycolysis, TCA cycle, Gluconeogenesis, Control of blood glucose, pentose phosphate pathway
- 5.3. Lipid metabolism, cholesterol synthesis, transport and excretion
- 5.4. Hormonal regulation and fuel metabolism

Unit-6: Clinical Biochemistry-II:(10h)

- 6.1. Cardiac profile tests
- 6.2. Kidney function tests
- 6.3. Liver function tests
- 6.4. Laboratory determination of lipids in serum
- 6.5. Determination of hormones
- 6.6. Determination of glucose and glycosylated haemoglobin

Unit-7: Diagnostic Serology: (08 h)

- 7.1. Widal test and Immunological pregnancy test
- 7.2. Detection of rheumatoid factor and CRP
- 7.3. Detection of HBsAg
- 7.4. Detection of Dengue Fever and *Leptospira* IgM
- 7.5. Detection of malarial parasite by strip test and microscopy
- 7.6. Detection of allergens and antinuclear antibodies

Unit-8: Cytogenetics and Automation in Clinical Laboratories: (5h)

- 8.1. Cell culture, Karyotyping and FISH
- 8.2. Prenatal chromosomal diagnosis
- 8.3. Automation in bacteriology
- 8.4. Discrete autoanalyzers
- 8.5. Introduction to working of semi-autoanalyzer

Practicals:

1. To determine SGPT and SGOT.
2. To perform Routine urine examination
3. Microbiological diagnosis of suspected infection of *Salmonella*.
4. Microbiological diagnosis of Urinary Tract Infection
5. Estimation of blood sugar by GOD method

Name of Faculty: Science	Department: Biotechnology
Program: M.Sc. Medical Biotechnology	Type: Theory + Practical
Subject: DSC-4 Cancer & Stem Cell Biology	Semester: 2
Credit: 04 + 02	Total Learning Hours: 60
Course Description: This course will make students aware & scientifically informed about fundamental concepts of Cancer & Stem cell biology till molecular levels. It will also prepare them for future research work in different fields & topics of these areas. It will provide adequate knowledge about recent strategies & applications in the field of treatment of cancers & about stem therapies.	
Student Learning Outcome: After completion of the course student will be able to <ol style="list-style-type: none"> 1) knowing cause, treatment, diagnosis & types of cancer 2) aware of molecular mechanisms behind cancer 3) well informed about stem cell sources, types, properties & applications 4) do research in different aspects of cancer & stem cell biology 	

Unit 1 – Introduction To Cancer Biology (07 Hours)

- 1.1 Definition, epidemiology of cancer & basic properties of cancer cell
- 1.2 Carcinogenesis
- 1.3 Causes of Cancer
- 1.4 Types of Cancer
- 1.5 Tumor behavior

Unit 2- Molecular & Cellular Perspective Of Cancer (08 Hours)

- 2.1 Proto-oncogenes & Oncogenes
- 2.2 Tumor Suppressor Genes
- 2.3 Molecular Cytogenetic of Cancer
- 2.4 Angiogenesis
- 2.5 Epigenetics & miRNAs in human cancers

Unit 3 – Diagnostic Tools & Few Prevalent Cancers (08 Hours)

- 3.1 Conventional methods
- 3.2 Advanced methods
- 3.3 Liver Cancer
- 3.4 Lung Cancer
- 3.5 Breast Cancer

Unit 4 –Cancer Therapy & Treatment (07 Hours)

- 4.1 Principles of Cancer therapy
- 4.2 Conventional Cancer therapy
- 4.3 Advanced Cancer therapy
- 4.4 Role of Plant metabolites in Cancer treatment
- 4.5 Biotechnology in Cancer treatment

Unit 5 – Introduction To Stem Cells (07 Hours)

- 5.1 Definitions – stem cells & stem cell lines

- 5.2 Types of Stem Cells & Sources of stem cells
- 5.3 Properties of Stem Cells
- 5.4 Applications of Stem cells
- 5.5 Advantages & limitations of stem cells

Unit 6-Basic Research To Stem Cell Therapy (08 Hours)

- 6.1 Cancer Stem Cells
- 6.2 Stem cell markers
- 6.3 Planarian totipotent stem cells
- 6.4 Zebrafish in Stem Cell Research
- 6.5 Genetic Manipulation of Pluripotent stem cells

Unit 7--Molecular Mechanisms Of Stem Cells (08 Hours)

- 7.1 Clinical Translation of Stem cells
- 7.2 Mechanisms of Stem Cells self-renewal
- 7.3 Cell cycle regulators in Adult stem cells
- 7.4 Stem Cells Niches (Drosophila & mammalian)
- 7.5 Regulation of Adult Stem cells

Unit 8- Applications Of Stem Cells (07 Hours)

- 8.1 Stems cells & Tissue Engineering
- 8.2 Stems cells & Cancer
- 8.3 Stem cells in regenerative medicines
- 8.4 Stem cells & gene therapy
- 8.5 Stems in Research

Practicals:

- 1) Visit to a Cancer Hospital
- 2) Case studies on any one type of Cancer
- 3) Seminar Presentation on novel topics related to stem cells

Name of faculty: Science	Department: Chemistry
Program: M.Sc.	Type: Theory + Practical
Subject : SEC-2 Instrumentation and Analytical Techniques	Semester- 2
Credit: 04 + 02	Total learning hours: 60
Course description: This Course Paper proposes to teach about Principle, Instrumentation and Applications of various spectroscopy and chromatographic techniques, advanced instrumentation techniques, chemical sensors and biosensors.	
Student learning outcome: At the end of the course students will be able to... Learn <ul style="list-style-type: none"> • The History, origin, laws, principles, theories, instrumental set up, its' working mechanism, various components and it's working pattern, procedure of analysis and applications in the various field of analysis about: • Visible Spectroscopy • Atomic Absorption Spectrometry • Optical Emission Spectrometry • Advanced Instrumentation Techniques • Gas Chromatography • High Performance Liquid Chromatography • Ion Exchange and Ion Exclusion Chromatography • Chemical Sensors and Biosensors 	

Unit 1. Visible Spectroscopy

06 Hours

- 1.1 Characteristics of electromagnetic spectrum
- 1.2 Origin of spectra and electronics transitions
- 1.3 Laws of absorption of radiation - Lambert & Beer's law and its deviation
- 1.4 The architecture of a spectrophotometer
- 1.5 Calibration curve and standard addition method - multi component analysis
- 1.6 Applications of UV-visible spectroscopy

Unit 2. Atomic Absorption Spectrometry

08 Hours

- 2.1 The history & principle of atomic absorption spectroscopy
- 2.2 AAS – Instrumentation
 - 2.2.1 Radiation sources: line & continuum
 - 2.2.2 Atomization techniques: FAAS & GFAAS
 - 2.2.3 Wavelength selector: monochromator
 - 2.2.4 Detectors: PMT
 - 2.2.5 Single & double beam AAS
- 2.5 Applications of atomic absorption spectrometry

Unit 3. Optical Emission Spectrometry

08 Hours

- 3.1 Introduction and principle
- 3.2 Atomic spectroscopic sources
- 3.3 Inductively coupled plasma - the discharge
- 3.4 ICP-OES Instrumentation
 - 3.4.1 Nebulizers
 - 3.4.2 Spray Chambers
 - 3.4.3 Sample introduction systems

- 3.4.4 Optics and the spectrometer
- 3.4.5 Emission detectors
- 3.5 Applications of ICP-OES

Unit 4. Advanced Instrumentation Techniques

06 Hours

- 4.1 Principle, Instrumental set up & Applications of Non dispersive IR (gas analyzer)
- 4.2 Modern elemental analyzer
- 4.3 Total organic carbon analyzer
- 4.4 Mossbauer Spectroscopy
- 4.5 Turbidimetry
- 4.6 Nephelometry

Unit 5. Gas Chromatography

08 Hours

- 5.1 Introduction of chromatography and principle of separation
- 5.2 Classification -GSC and GLC & its applications
- 5.3 Components of instruments: carrier gas, sample injection system, stationary and mobile phase
- 5.4 Columns - packed column and capillary column - WCOT, SCOT, PLOT
- 5.5 Detectors - FID, TCD, ECD, ASD
- 5.6 Principle and applications of GC-MS, GC-MS

Unit 6. High Performance Liquid Chromatography

08 Hours

- 6.1 Introduction, principle and types of HPLC
- 6.2 Components of instruments: pumps high pressure, pneumatic, syringe, reciprocating, hydraulic
- 6.3 Sample injection system
- 6.4 Column
- 6.5 Detector: ultraviolet light absorption, refractive index, evaporative light scattering
- 6.6 Selective applications in separation and estimations
- 6.7 Principle and applications of LC-MS

Unit 7. Ion Exchange and Ion Exclusion Chromatography

08 Hours

- 7.1 Ion exchangers – types, characteristics and properties
- 7.2 Ion exchange equilibrium and factors affecting it
- 7.3 Instrumental set up of IEC- columns and detector
- 7.4 Principle, procedure and applications of IEC
- 7.5 Principle, working procedure and applications of Ion Exclusion Chromatography:
- 7.5.1 Gel Permeation Chromatography
- 7.5.2 Ion Exclusion Technique
- 7.5.3 Inorganic Molecular Sieves

Unit 8. Chemical Sensors and Biosensors

08 Hours

- 8.1 Definition and classification of sensors, Signal and noise
- 8.2 Efficiency of sensors, sensitivity and limit of detection
- 8.3 Principle and applications of
- 8.3.1 Electrochemical sensors
- 8.3.1.1 Coulometry & Potentiometry

- 8.3.1.2 Conductometry & Amperometry
- 8.3.1.3 Polarography & Voltammetry
- 8.3.2 Solid state electrode & Mass sensitive sensors
- 8.3.3 Optical sensors & Thermal sensors
- 8.3.4 Biosensors & Biocatalytic biosensors

Name of faculty: Science	Department: Microbiology
Program: M.Sc.	Type: Theory + Practical
Subject: DSE-2 Bioinformatics & Other “OMICS”	Semester-2
Credit: 04 + 02	Total learning hours: 60
<p>Course description: The paper mainly emphasizes on study concept development and application of omics and Bioinformatics. The objective of the paper is to introduce students to the rapidly evolving field of bioinformatics. Explain the different NGS study designs, outline the application areas of comparative genomics and proteomics. Describe some relevant databases, sequence alignment methods and various bioinformatics application.</p>	
<p>Student learning outcome: After learning this course students will be able to understand.</p> <ul style="list-style-type: none"> ● Concept, Mechanism and application genomics, Proteomics and metagenomics ● Students will utilize the available biological database, online resources and tools. ● Students will be able to understand and perform the biomolecular structure visualization, sequences alignment, modelling and drug discovery. 	

Unit-1: Genomics (Duration: 08 Hrs)

- 1.1 Introduction to Genomics: Structural, Functional and Comparative
- 1.2 Next Generation Sequencing Technologies
- 1.3 Genome Mapping
- 1.4 Genome Assembling and annotation

Unit-2: Proteomics (Duration:08 Hrs)

- 2.1 Genomics to Proteomics: the way forward
- 2.2 Interaction Proteomics: Methods of Protein-Protein Interaction
- 2.3 Wet lab Techniques for proteomics data generation: 2-D Differential gel electrophoresis, Protein Microarray and its Application, Types and Manufacture of protein chip.
- 2.4 Application of Proteomics.

Unit-3: System Biology (Duration: 07 Hrs)

- 3.1 Systems biology: Understanding of Biological Systems
- 3.2 Microbial Metabolomics
- 3.3 Mass Spectrometry-Based Microbial Metabolomics: Techniques, Analysis, and Applications.
- 3.4 Concept of Synthetic biology

- Unit-4: Other omics (Duration: 07 Hrs)**
- 4.1 Metagenomics: Fundamental concepts, library construction and screening methods
 - 4.2 Mining Metagenomes for Novel Bioactive Molecules
 - 4.3 Transcriptomics: RNA level Gene Expression: DNA Micro array Technology and its Application, Printing Technologies
 - 4.4 Concepts of Culturomics, Metatranscriptomics and Metaproteomics

- Unit-5: Major Bioinformatics Resources (Duration:08 Hrs)**
- 5.1 Databases in Bioinformatics
 - 5.2 Sequence databases: NCBI, DDBJ, EMBL, PIR, Swissprot
 - 5.3 3D Structure and classification Database : PDB, MMDB, CDD, E-MSD, 3-D Genomics, CATH, SCOP, InterPro, Prosite, Pfam, ProDom.
 - 5.4 Database Searches: Keyword-based searches using tools like ENTREZ and SRS
 - 5.5 Sequence-based searches: BLAST and FASTA

- Unit-6: Sequence Alignment (Duration:08 Hrs)**
- 6.1 Sequence Analysis, Basic concepts: Sequence similarity, identity and Homology, Scoring Matrix.
 - 6.2 Pairwise and Multiple sequence alignments
 - 6.3 Molecular Phylogenetics
 - 6.4 Phylogenetic Tree Construction Methods and Programs

- Unit-7: Comparison of protein 3D structures (Duration: 07 Hrs)**
- 7.1 Protein primary structure analysis and prediction.
 - 7.2 Secondary structure prediction: Algorithms viz. Chou Fasman, GOR methods
 - 7.3 Tertiary Structure prediction: Fundamentals of the methods for 3D structure prediction
 - 7.4 Homology/comparative Modeling, fold recognition, threading approaches, and *ab initio* structure prediction methods

- Unit-8: Bioinformatics Application (Duration:07 Hrs)**
- 1.1 Bioinformatics Application in drug design: Chemical databases like NCI /PUBCHEM.
 - 1.2 Fundamentals of Receptor-ligand interactions.
 - 1.3 Structure-based drug design:
 - 1.4 Ligand based drug design: Structure Activity Relationship – QSARs & Pharmacophore etc.
 - 1.5 *In silico* predictions of drug activity and ADMET.

Practicals:

- 1) Biological databases search and Retrieval of Data.
- 2) Pair-wise and multiple sequence alignment
- 3) Perform the phylogenetic analysis using Clustal Omega
- 4) ORF Finding
- 5) Primer designing
- 6) Protein structure prediction
- 7) Homology Modeling

Name of faculty: Dr. Hemangi Desai	Department: Chemistry
Program: M.Sc. Organic Chemistry	Type: Theory
Semester: II	
Subject: DSE-II- Forensic Chemistry & Toxicology	
Credit: 04(T) + 02 (P)	Total learning hours: 60
Course description: This course paper intends to deal about the Forensic Toxicology , the branch of science that applies the principles and knowledge of toxicology to issues and problems in the field of law. To achieve this, techniques of analytical chemistry are combined with principles of toxicology to address issues related to the toxic effects of substances on humans that are germane to judicial proceedings. Analytical chemistry deals with the techniques and methods for determining the identity and relative amounts of unknown components in a sample of matter.	
Student learning outcome: At the end of the course students will be able to learn... <ul style="list-style-type: none"> • Forensic chemistry and its scope, • Examination of petroleum products, fires, explosives, • Types of forensic toxicology, analysis, extraction, isolation and clean up procedures, • Forensic examination of metallic poison and various organic-toxic compounds. 	

Unit 1: Forensic Chemistry and its Scope

(16 hrs)

- 1.1 Analysis of beverages:
Alcohol and Non- alcoholic, country made liquor, illicit liquor
- 1.2 Drugs of abuse: Introduction, Classification, Narcotic drugs & Psychotropic substances, drugs of abuse in sports.
- 1.3 Brief Introduction to Drugs and cosmetic act, Excise Act, NDPS Act
- 1.4 Analysis of Gold and Other metals in cheating cases.

Unit 2: Examination of Petroleum Products

(14 hrs)

- 2.1 Distillation & Fractionation, various fraction and their commercial uses.
- 2.2 Standard methods of analysis of petroleum products for adulteration
- 2.3 Trap cases: purpose, examination of chemicals used in trap case
- 2.4 Cement: Composition, types and Forensic analysis, Mortar & Concrete

Unit 3: Fires

(13 hrs)

- 1.1.1 Nature and Chemistry of fire, Classification
- 1.2 Igniters of fires, Phases of fires, Main types of fires
- 1.3 Examination of scene of fires
- 1.4 Arson: Relevant IPC sections, Motives, Analysis of Accelerants

Unit 4: Explosives

(14 hrs)

- 4.1 Classification, Comparison & characterization of explosives
- 4.2 Military & Commercial explosives
- 4.3 Qualitative determination: Detection of Explosophores (anions), Detection of Black powder, Nitrocellulose and Dynamite,
- 4.4 Quantitative determination

Unit 5: Forensic Toxicology

(14 hrs)

- 5.1 Introduction, concept and Significance
- 5.2 Poisons: Definition, Classification of poisons
- 5.3 Types of poisoning sign and symptoms of poisoning
- 5.4 Mode of action, factors modifying the action of poisons
- 5.5 Toxicological exhibits in fatal and survival cases
- 5.6 Preservation Treatment in cases of poisoning
- 5.7 Analysis report

Unit 6: Extraction, Isolation and Clean-up procedures (15 hrs)

- 6.1 Non-volatile organic poison
- 6.2 Stas-otto, Dovbriy Nickolls (Ammonium sulphate) method, acid digest and Valov(Tungstate) methods, Solid phase micro extraction techniques, Solvent extraction methods
- 6.3 Volatile Poisons: Industrial solvent acid and basic Distillation
- 6.4 Toxic Cations: Dry Ashing and Wet digestion process
- 6.5 Toxic Anions: Dialysis method total alcoholic extract

Unit 7: General Study and Analysis (13 hrs)

- 7.1 Barbiturates, methaqualone, Hydro morphine, Methadone, Meprobamate, Mescaline, Amphetamines, LDS, Heroin, Cannabinoids, Phinothiazines
- 7.2 Insecticides: Types, General methods for their analysis
- 7.3 Alkaloids: Definition, classification, Isolation and General characterization.
- 7.4 Analysis of Ethyl Alcohol in blood and urine, illicit liquor, Methanol, Acetone, Chloroform, Phenol
- 7.5 Snake venoms and Poisons, Irrespirable gases
- 7.6 Vegetable poisons, Opium, Abrus, Cyanogenetic glycosides, Dhatura, Marking nuts, Nux-vomica, Oleander and Aconite
- 7.7 Forensic Pharmacological studies:
Absorption, Distribution, Metabolism, Pathways of drug metabolism

Unit 8: Forensic Examination of Metallic Poisons (14 hrs)

- 8.1 Absorption, Distribution, Metabolism, Pathways of metallic poison metabolism:
Arsenic, Mercury, Lead, Bismuth, Copper, Aluminium, Iron, Barium, Zinc.

Laboratory Practical

1. Estimation of mixture (Acid + Amide)
2. Estimation of mixture (Acid + Ester)
3. Organic synthesis of Paracetamol.
4. Organic synthesis of 6 - methyluracil.
5. Organic synthesis of Acridone.
6. Organic synthesis of Methyl Orange.
7. Determination of Phenol in water sample by Spectrophotometer.
8. Determination of COD in water sample by Spectrophotometer.
9. Estimation of Sugar in natural sample by Spectrophotometer.
10. Identification of salts and metals by simple colour test and group analysis.
11. Identification of different vegetable poison by colour test, chromatography etc.
12. Identification of insecticides and pesticides by TLC/ colour test.

Name of faculty: Science	Department: Environmental Science
Program: M.Sc.	Type: Theory
Subject: DSE-3 Intellectual Property Rights	Semester: 3
Credit: 04 + 02	Total learning hours: 60
Student learning outcome: At the end of the course students will be able to...understand about <ul style="list-style-type: none"> • The course is designed to provide comprehensive knowledge to the students regarding principles of IPR, concept and theories. • The course is designed to provide knowledge regarding historical development, procedure for granting patent, infringement. • The course is designed to provide comprehensive knowledge to the students regarding the effect of IPR especially of patents on emerging issues like public health, climate, Domain Name Disputes and Cyber-squatting, Bio piracy etc. and the ways to tackle this problem, 	

Unit-1: Introduction to IPR (7 Lecture)

- 1.1 Introduction, concept and theories
- 1.2 Kinds of IPR
- 1.3 Need for private rights versus public interests
- 1.4 Advantages and disadvantages of IPR

UNIT-2: Criticism and world Scenario (7 Lecture)

- 2.1 Criticisms of IPR
- 2.2 Politics of IPR
- 2.3 Third World Criticisms and Marxist Criticisms
- 2.4 International Regime relating to IPR, TRIPs and other treaties (WIPO,WTO,GATTs)

UNIT-3 Patent law-1 (7 Lecture)

- 3.1 Research exemption and historical development in IPR law
- 3.2 Concepts in IPR: novelty, utility, inventiveness/non-obviousness
- 3.3 Patent protection: software patent, product, process and microorganisms
- 3.4 Patent Act-1970-amendments of 1999,2000,2002 and 2005

UNIT-4 Patent law-2 (7 Lecture)

- 4.1 Rights of patentee
- 4.2 Procedure for granting a patent and obtaining patent
- 4.3 grounds for opposition
- 4.4 Working of patents, compulsory license, acquisition, surrender, revocation and restoration
- 4.5 Transfer of patent rights.

UNIT-5 Infringement of IPR (7 Lecture)

- 5.1 Introduction to direct, contributory and induced
- 5.2 Infringer and determined
- 5.3 Official machinery, controller, powers and functions
- 5.4 Defenses to infringement

UNIT-6 Copyright and law (7 Lecture)

- 6.1 Copyright and neighboring right : Concept and principles
