Semester - III and Semester - IV

Name of College: Shree Ramkrishna Institute of Computer Education and Applied Sciences						
Faculty	Faculty of Computer Science and Applications		Program		B.Sc. Artificial Intelligence and Data Science	
Year	2026		Version		2.0	
Semester	IV		Effective From		June, 2026	
Course Code	BSCS31408	Course Name	Web Application Development-II (ASP.Net) (Th)			
Teaching Scheme				Examination Scheme		
Credits	Lecture (L)	Tutorial (T)	Practical (P)	Continuous and Comprehensive Evaluation (CCE)	Semester end examinations (SEE)	Total
3	3	-	-	40	35	75

Purpose of Course	The course aims to make students capable of developing basic web applications using the latest tools and technologies of C#.Net.
Course Objective	To provide an in-depth knowledge of the most recent server-side programming technology.
Pre-requisite	Basic understanding of Web, HTTP, HTML, JavaScript
Course Out come	After completing this course, the student will be capable of developing basic web applications using the latest tools and technologies of C#.Net.
Course Content	Unit-1: Overview of .net framework [05 Hrs] 1.1 .Net framework & its benefits 1.2 The .Net Framework CLR – 1.2.1 Common Type System (CTS) 1.2.2 Common Language Specification (CLS) 1.2.3 Garbage Collector (GC) 1.2.4 Microsoft Intermediate Language (MISL) 1.3 ASP.NET - Event Driven Programming 1.4. Files & Directories 1.5 Page Lifecycle 1.6 Concept of Postback – Page.IsPostBack 1.7 Error Handling Concepts – Application Level, Page Level, Code Level Unit 2: Client Server Communication & Application Management [05 Hrs]

Credits	Lecture (L)	Tutorial (T)	Practical (P)	Continuous and Comprehensive Evaluation (CCE)	Semester end examinations (SEE)	Total
3	3	-	-	40	35	75

Purpose of Course	The purpose of the course is to make students capable of implementing concepts, methods and tools related to python programming and basic data science operations.
Course Objective	This subject aims to cover the python language programming with emphasis on various python data structures and various libraries like Pandas, NumPy, Matplotlib for performing various data science operations.
Pre-requisite	Basic concepts of Programming
Course Outcome	After completion of this course, the student will be capable of performing application level programming using python language with basic data science operations.
Course Content	Unit 1 Python for Data Science [5 hrs] 1.1 Python Libraries for Data Science 1.2 Data operations: Reading, selecting, filtering, manipulating, sorting, grouping, rearranging, ranking, and plotting. 1.3 Descriptive statistics, data preparation. Exploratory Data Analysis data summarization, data distribution Unit 2 Numerical Python - NumPy [5 hrs] 2.1 Introduction to Numpy 2.2 Array Operations using Numpy 2.3 Array Broadcasting 2.4 N-dimensional Array Processing 2.5 Numpy Functions

3	3	-	-	40	35	75

Purpose of Course	This course imparts the knowledge of Data Structure. The concepts of Primitive and non-primitive data structures are covered in this course. It covers concepts of Arrays, Stack, Queue, Link list and sorting searching methods. The course is aimed to give inner depth of non-primitive data structures and its related applications.
Course Objective	To make students understand concepts of Primitive and non-primitive Data structure. To make students understand concepts of stack, queue and types of queues. To make students understand concepts of Link-list and related applications. To make students work with searching and sorting techniques.
Pre-requisite	Students are expected to have understanding of computer programming
Course Out come	At the end of the course, students are expected to have clear concepts about the primitive and non-primitive data structures.
Course Content	Unit 1 Introduction to Data Structure 1.1 Concept of data, their characteristics, significance and digital storage mechanism, Concept of Data Structure 1.2 Types of data structures 1.2.1 Primitive Data Structures- integer, character, boolean

FACULTY OF COMPUTER SCIENCE AND APPLICATIONS
B.Sc. (Honours) (Artificial Intelligence and Data Science) /
B.Sc. (Honours with Research) (Artificial Intelligence and Data Science)
Semester - III and Semester - IV

Purpose of Course	To make student understand about basic of network and how one can design the same.
Course Objective	Learn about how computer networks are organized and it's protocol with the concept of layered approach Learn concept of network management & it's tool Learn more about basic of Information & network security
Pre-requisite	Knowledge of basics of operating system and any programming language.
Course Out come	After successful completion of the course students should be able to: ● analyze the requirements for a given organizational structure and select the most appropriate networking architecture and technologies; ● Analyze, specify and design the topological and routing strategies for an IP based networking infrastructure ◆ Analyze the requirements of company or organization security and its purpose and select to apply appropriate tools needed for the same; ◆ Evaluate the authentication and encryption needs of an information system
Course Content	Unit 1. Introduction to Computer Networks (5-6 Hrs) 1.1 Basics of computer network, advantages, disadvantages, Analogue and Digital Signals, Frequency, bandwidth, datagram , packets, frames, message, Synchronous and Asynchronous communication, Simplex, half-duplex and full-duplex transmission 1.2 Connecting devices: NIC, Bridges, router, switches, Repeater, Access Points 1.3 Network types: LAN, MAN, PAN, WAN 1.4 Network topology: Bus, Star, Ring, Mesh, Hybrid 1.5 Different Types of Transmission Media, Guided and unguided data transmission Unit 2. Reference Model (7-8 Hrs) 2.1 Physical Layer: End to end data transmission 2.2 Data Link Layer - MAC & LLC Sub layers 2.3 Error classification-Delay distortion Attenuation, noise 2.4 Types of errors – Single bit error and burst errors. 2.5 Error detection – Parity check (VRC) , LRC, CRC 2.6 CSMA/CD, CSMA/CA, IEEE Standards Unit 3 Upper Level Layers (9-10 Hrs) 3.1 Network Layer: Addressing - IP Address, subnet, gateway, Physical and logical address , IP address Classes A to E, Use of different class at various places, IP Binding and IP cloning, Proxy, Static IP address and its benefits, routing table 3.2 Concept of Unicast, Broadcast, Multicast and anycast 3.3 Protocols and its use: NAT, ARP, RARP, ICMP, IPv4, IPv6, DHCP Unit 4. Transport layer (7-8 Hrs) 4.1 UDP and TCP-packet heads, services, communication, Flow and Error & congestion control 4.2 Session, Presentation, and Application Layers: SMTP, IMAP, HTTP, FTP, DNS, VOIP.

Purpose of Course	To gain knowledge of Knowledge and Logic, Knowledge Frameworks and Sanskrit Linguistic - I ,NLP
Course Objective	. The course aims to teach students how to build intelligent systems capable of reasoning, learning, and making decisions like humans
Pre-requisite	Basic of Knowledge, and Logic
Course Out come	Focus on equipping students with foundational skills in reasoning, logical problem-solving, and the computational mechanics of AI.
Course Content	Unit 1: Knowledge and Logic (08 hours) ● Tarka : Indian Art of Debate ● The Knowledge Triangle ● Prameya - Dravyas, Attributes, Action ● Pramana - Means of Valid Knowledge ● Samasya - AMbiguities in existing knowledge Unit 2: Knowledge Frameworks (07 hours) ● Deductive/Inductive KF ● Potential Fallacies in Reasoning Process ● Established Tanets in field of Study

Program: B.Sc. (Hons)	Type: Ability Enhancement Course (AEC)
Semester: I / II	
Subject: Environment Studies	
Credit: 02	Total learning hours: 30
Prerequisite: Efficacy towards understanding natural systems and its sustainability. Rationale: Sustainability is the prime goal of today's modern world. Transformation and pro-conservation actions is the prime approach to conserve the environmental values. Honourable Supreme Court of India has made it 'mandatory' to introduce a basic course on environment at the undergraduate level.	

Unit 1: Introduction to environmental studies and Natural Resources: Renewable & Non-renewable Resources • Multidisciplinary nature of environmental studies; • Scope and importance; Concept of sustainability and sustainable development. • Energy Resources: Renewable and non-renewable energy sources, use of alternate energy sources.	(6 lectures)
Unit 2 : Ecosystems & Biodiversity • Ecosystems: Basic concepts. • Forest, Grassland, Desert and Aquatic Ecosystems. • Introduction to Biodiversity. • Biodiversity Conservation.	(7 lectures)
Unit 3: Environmental Pollution & Environmental Issues • Environmental pollution : Air, water, soil and noise pollution; effects and controls • Nuclear hazards and human health risks. • Climate change, global warming, ozone layer depletion, acid rain. • Impacts on human communities and agriculture.	(7 lectures)
Unit 4: Environmental Policies/ Practices & Role of Human Communities • Environment Laws: Environment Protection Act: Air (Prevention & Control of Pollution) Act: Water (Prevention and control of Pollution) Act • Wildlife Protection Act: Forest Conservation Act. International agreements: Montreal and Kyoto protocols and Convention on Biological Diversity (CBD) • Environmental movements: Chipko, Silent valley, Bishnois of Rajasthan. • Environmental ethics: Role of Indian and other religions and cultures in environmental conservation. Field work • Visit to an area to document environmental assets: river/ forest/ flora/fauna, etc. • Visit to a local polluted site---Urban/Rural/Industrial/Agricultural.	(10 lectures)
