| <b>Purpose of Course</b>          | To develop the understanding of object-oriented programming concepts through programming using java as the computer programming language.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Course Objective</b>           | <ul style="list-style-type: none"> <li>● To learn inheritance, polymorphism, abstraction and encapsulation</li> <li>● To understand the utility of package</li> <li>● To learn exception handling</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Pre-requisite</b>              | Programming basics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Course Outcome</b>             | At the end of the course, student is expected to have understanding about the concepts of object-oriented programming, inheritance, polymorphism, interfaces and packages                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Last Review / Revision</b>     | -                                                                                                                                                                                                                                                                                   |
| <b>Purpose of Course</b>          | The aim of this course is to introduce to the students about the emerging technologies and upcoming areas of computer science and information technology. Students will become familiar with special branches of the field which are future specialization areas of their learning. |
| <b>Course Objective</b>           | To Gain understanding about special branches of the IT field.<br>To Gain knowledge AI, Data Science, Information and Cyber Security and Web Mobile technologies.<br>To Understand application areas and future prospects of same branches.                                          |
| <b>Pr-requisite</b>               | NIL                                                                                                                                                                                                                                                                                 |
| <b>Course Outcome</b>             | At the end of the course, student is expected to have understanding about the introductory ideas of AI, Data Science, Information and Cyber Security, Web Mobile technologies, Cloud Computing and IoT. as fields of IT.                                                            |

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 5.6 Application Areas and Job Profiles

### **Unit 6 Cyber Security**

**[7 hrs]**

- 6.1 Introduction & defining the Cyber Security
- 6.2 Frauds in IT, Banking, Mobile network, telecommunications
- 6.3 Cyber Crime and Frauds
- 6.4 Ethical and unethical hacking, Application Areas of Cyber Security
- 6.5 Careers in Cyber Security

### **Unit 7 Cloud Computing**

- 7.1 Introduction to Cloud
- 7.2 Defining a cloud, Characteristics and benefits
- 7.3 Virtualization, Service-oriented computing
- 7.4 Types of Cloud
- 7.5 Computing platforms and technologies AWS, Google App Engine, Salseforce

### **Unit 8 Internet of Things**

- 8.1 Overview of IoT
- 8.2 IoT Categories - Consumer IoT, Industrial IoT, Infrastructure IoT
- 8.3 IoT Applications - Industrial Automation
- 8.4 IoT Devices - Arduino, Raspberry Pi
- 8.5 Challenges of IoT

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Minimum weeks per Semester</b> | 15 (Including Class work, examination, preparation, holidays etc.)                                                                                              |
| <b>Last Review / Revision</b>     | -                                                                                                                                                               |
| <b>Purpose of Course</b>          | The purpose of the course is to make students capable of developing web applications interface using latest designing frameworks, UI/UX tools and technologies. |
| <b>Course Objective</b>           | To provide knowledge of web design concepts and most recent UI/UX tools                                                                                         |
| <b>Pr-requisite</b>               | NIL                                                                                                                                                             |
| <b>Course Outcome</b>             | After completion of this course, the students will be capable of developing effective and interactive front end for web applications                            |

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Course Objective  | <p>This course provides an idea of electronics- its meaning and its domain in today's technology.</p> <p>It provides the electronic component types detail understanding of semiconductor devices.</p> <p>It also provides the algorithm of digital word and basics of optical fiber communication.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Course Outcome    | <p>1.Students will develop the skill to deal with active and passive components and their biasing mechanism.</p> <p>2. Students will understand the working of different semiconductor devices and get the importance of their uses in daily life.</p> <p>3.Students will understand the basics of sensors, storage devices and electromechanical systems.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Course Content    | <p><b>Unit 1. Introduction to Electronics and solid state Physics</b> <span style="float: right;"><b>[7 hrs]</b></span></p> <p>1.1 Fundamental electronic component: Active and Passive.<br/>Series and parallel connections of resistors and capacitors,</p> <p>1.2 Structure of solids- Bonding in solids,<br/>Energy bands, Conductors, semiconductors and Insulators.</p> <p>1.3 Semiconductors-semiconductor materials, intrinsic semiconductors, extrinsic semiconductors</p> <p><b>Unit 2. Semiconductor diodes</b> <span style="float: right;"><b>[7 hrs]</b></span></p> <p>2.1. P-N Junction diode:<br/>Forward and Reverse biasing mechanism, characteristics.</p> <p>2.2. Zener diode: Working principle, breakdown mechanism and characteristics</p> <p><b>Unit 3. Optoelectronic Devices</b> <span style="float: right;"><b>[7 hrs]</b></span></p> <p>3.1. Introduction: wavelength and frequency, spectral response of Human eye.</p> <p>3.2. Working mechanism of Light Emitting Diode,</p> <p>3.3. Photo diodes, liquid crystal display (LCD)</p> <p>3.4. Solar Cell</p> |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Course Description:</b> <ul style="list-style-type: none"> <li>• The aim of this course is to deliver knowledge of Values and Morals in life</li> <li>• It also aims at walking the path to self-progress, peace and contentment in life.</li> </ul>                                                          |                                       |
| <b>Student Learning Outcome:</b><br>After completion of the course the student will be able to <ul style="list-style-type: none"> <li>• Use a number of life skills to achieve professional success</li> <li>• Contemplate and imbibe valuable lessons to strengthen themselves as better human being</li> </ul> |                                       |

### **Unit -1**

**(8 Hours)**

Remaking Yourself – Begin with end in mind, Being addiction free, Better health better future, impact of company

### **Unit -2**

**(8 Hours)**

From House to Home – Forgive & Forget

Facing failure – Timeless wisdom of daily life

### **Unit -3**

**(8 Hours)**

My India my Pride – Present Scenario, An ideal citizen-1 & 2

Learning From Legends – Leading without leading, words of wisdom

### **Unit – 4**

**(6 Hours)**

Soft Skills – Stress management, Financial planning

Selfless Service - Case study: Disaster relief
